

Wireless adapters allow you to use a compatible wireless headset or other audio accessory with your 2-way radio.

Our Wireless Adapters pair easily with thousands of off-the-shelf Wireless headsets and remember paired connections, even if the radio is turned off. If used with a headset that supports multiple pairings, the PRYMEBLU® adapters enable operation of both your cell phone and two-way radio with the same headset. The accessory jack also allows you to connect any PRYME QD™ (Quick Disconnect) series wired audio accessory, such as a remote Push-to-Talk or lapel microphone, in combination with the wireless headset.

Our newer V2 Adapters are smaller than our old adapters, and plug directly onto the radios, so they are truly wireless, and don't need to be clipped to your belt or clothing. V2 Adapters work with our BT-PTT-Z mini buttons, which are very small, and use LE (Low Energy) (see pg.9)

See pg. 9 for descriptions and pricing for all of our Wireless Adapters. Please contact our sales department for current availability of the V2 Adapters.
